Statement of Relevance

In the Office Action from the Japanese Patent Office, the Examiner stated that Japanese Unexamined Patent Publication No. 08-079914 (refer to paragraph 0021 and Fig. 2) discloses a hybrid vehicle in which a first motor-generator (4) is connected with the vehicle drive shaft, a second motor-generator (2) is connected with the engine output shaft, and when a charge voltage of the battery becomes larger than the predetermined value in a vehicle deceleration, the first motor-generator regenerates and the second motor-generator operates the engine during a fuel cut by force to consume the electric power to prevent from an excessive charging of the battery.
